a
The same architecture, three regimes
published value
published split, test partition
93.9% of test ligands also in training
published split, external holdout
no ligand overlap (40 ligands)
ligand-disjoint cross-validation
no ligand overlap by construction
0.0
0.5
1.0
1.5
2.0
2.5
mean absolute error of log K
b
Accuracy against calibration
selected model: heteroscedastic MLP ensemble
ad hoc, difference of two absolute predictions
direct, modelled on the pairwise target
best point-only ad hoc model
