Risk-score orientation audit

Score	Direction	
σ_{total}	higher = greater risk	✓
$\sigma_{\text{epistemic, within}}$	higher = greater risk	✓
$\sigma_{\text{epistemic, between}}$	higher = greater risk	✓
$\sigma_{\text{aleatoric}}$	higher = greater risk	✓
pair-density risk	higher = greater risk	✓
RDKit feature-centroid Mahalanobis distance	higher = greater risk	✓
Tanimoto median distance	higher = greater risk	✓
Tanimoto NN distance	higher = greater risk	✓

All score orientations were verified before retention analysis; higher scores indicate greater predicted risk.
